

Scotland 2050

The thing I would like to see is

... Actively collaborate across Scottish Government Departments and with other partners to exploit Scotland's capacity to generate energy from wind/sun/geothermal as an exportable product i.e. as electricity by wire or as stored fuel, net zero product such as green hydrogen or green ammonia

I would like to see this because ...

. Scotland is not making the most of its assets with regard job creation, economic growth and climate change – this is a way to work smarter

Addressed to those who can best make this happen:

Scottish Government to lead on policy to create a commercially led approach to optimise take up by commercial partners
Commercial partners to lead on collaborative delivery

Scotland 2050

The thing I would like to see is....

Target significant investment in sites with transformative potential to unlock a net zero carbon economy and provide support to manage the delivery risk which is attached to innovation

I would like to see this because ...

We need to be forward looking and not be paralysed by our historical perspectives.
Adopt a "where there is a will there is a way" approach

Addressed to those who can best make this happen:

Led by Scottish Government with international commercial partners
