

# Scotland 2050

The thing I would like to see is

... Scottish and UK Governments to work collaboratively with others to plan blue and green infrastructure within the context of a National and international plans and demand requirements and the international marketplace

) I would like to see this because ...

- . We need a scalable infrastructure plan to support change
- Plans need to play to joint objectives and be collaborative

Addressed to those who can best make this happen:

Led by Scottish Government with international commercial partners
